# IT'S ALL IN THE DETAIL

## DANISH DESIGN

Hudevad Radiator Design are Danish designed Radiators of the highest quality.

From the very beginning, the focus has been on groundbreaking design, functionality and not least the small details that make a Hudevad radiator completely unique. With more than 85 years in the industry, Hudevad is still Denmark's leading design radiator manufacturer.

## UNIQUE RADIATORS

A real Hudevad radiator has a discreet and tight look and there is a reason for that.

Since no two architects have the same vision, the same aesthetics or the same desire for a building, the uniqueness of a Hudevad radiator is precisely the possibility of letting the radiator step completely into the background, become an integrated, sty-

lish part of the building and emphasize a room's unique architecture by means of the tight lines.

However, the tight lines can also do the exact opposite - to highlight and assist in clarifying the function of the room, the distinctiveness of a building or simply letting the radiator become the natural center of the room.

We do not get around the fact that a heat source is a necessity in any building, but with the help of the small unique Hudevad details, we provide the opportunity to create integrated and stylish solutions with unique design features. Colors, shapes, sizes and different design solutions are precisely Hudevad's force.

Hudevad offers a wide range of Radiators that, due to their versatility, can be used in all types of architectural styles.

## **SAME DESIGN THROUGHOUT THE BUILDING**

Our Hudevad Radiators are available both as a standard Horizontal radiator, Vertical radiator and as a Lowline radiator. It allows for a uniform and streamlined radiator design in all rooms - whether the wall space is limited, there are plenty of large window areas or whether the radiator should be built in.

## **THE EXTRA**

Hudevad is characterized by the tight and simple design, but there are constructions that require something completely different than that. It can be anything from the classic column radiator over special solutions for sports arenas to the radiator that has to be mounted on the ceiling. We are always within reach and are helpful in finding the right solution that suits your particular idea.

# HORIZONTALE RADIATORS

A Horizontal radiator across the wall has long been the classic dimension in homes and buildings worldwide. This does not mean that this traditional dimension needs to be dated in any way. New thinking and innovation from Hudevad gives you a beautiful versatility, where the possibilities in appearance and use burst the framework while still keeping the shape.

Hudevad design is about creating more than just heat and heating. Our Horizontal radiator is not only a source of efficient heat, but an important part of the building's style and appearance. A radiator that discreetly and elegantly harmonizes with the surroundings to create a higher unity and beautiful flow in the room.

# INTEGRAL HORIZONTAL

## INTEGRAL HORIZONTAL

Beautiful, simple and timeless design radiator with a completely smooth front plate, slightly rounded corners and open sides and top.

Integral Horizontal is used in private homes, private buildings and public institutions, such as hospitals, nursing homes, etc. as it is available both with and without convectors. Integral Horizontal is thus easy to clean and ensures a high standard of hygiene, while living up to today's design standards without sacrificing performance.

**Height** 300, 400, 500, 600, 700 & 900 mm

**Length** 400 - 2000 mm, in increments of 100 mm

**Depth** 15, 60, 78, 100 and 159 mm

# P5 HORIZONTAL

## P5 HORIZONTAL

Our Hudevad P5 Horizontal is narrow and simple, with a smooth front with the characteristic Hudevad edge and is made of 2 mm thick steel. The deeper models of the P5 have closed sides, welded steel, top with a streamlined effect which allows the air to circulate for maximum efficiency. P5 Horizontal is the perfect combination of design and technology.

P5 Horizontal can be used anywhere you want a strong radiator with great performance and a minimalist look.

**Height** 320, 420, 520, 620, 720 & 920 mm

**Length** 410 - 2020 mm, in increments of 100 mm

**Depth** 35, 62, 102 and 160 mm

# FIONIA HORIZONTAL

## FIONIA HORIZONTAL

Hudevad Fionia Horizontal is one of our best selling Horizontal Radiators. It is a beautiful and simple radiator that fits in both private and public buildings.

Fionia Horizontal has closed sides, the characteristic Hudevad edge and a removable grille with angled slats, so you can't look see the convectors inside. The grille is recessed in the top of the radiator so that it is flush with the radiator edge. This gives a calm and classic look, and at the same time reduces damage to the grille. The grille can be secured against theft.

**Height** 320, 420, 520, 620, 720 & 920 mm

**Length** 410 - 2020 mm, in increments of 100 mm

**Depth** 62, 102 and 160 mm

# PLAN HORIZONTAL

## PLAN HORIZONTAL

Hudevad Plan Horizontal is our original signature radiator, where the first Hudevad Plan left the factory back in 1939. Plan Horizontal has undergone a modernization in recent years, and is now reintroduced to the market in a new contemporary design.

Plan Horizontal is made of 2 mm steel with the characteristic Hudevad edge on the front plate, welded steel slats that align with the radiator edge at the top and closed sides. The slats in the top ensure a good air flow for an efficient heat distribution and make the radiator unique. Plan is robust and exudes style and durability.

**Height** 320, 420, 520, 620, 720 & 920 mm

**Length** 410 - 2020 mm, in increments of 100 mm

**Depth** 62, 102 and 160 mm

# SC HORIZONTAL

## SC HORIZONTAL

Hudevad SC Horizontal is the perfect heat source for modern buildings. It is unique and discreet at the same time, and has an exclusive look that can be customized in several ways for a completely unique product. The radiator does not block the light, as the narrow elements are placed vertically on top and bottom pipes. It is therefore ideal for placement in front of large windows and in corridors where the light is in focus. SC Horizontal can be supplied for both wall and floor, where the floor model has built-in legs.

**Height** 400-1000 mm in increments of 100 mm

**Length** 80-3000 mm in increments of 40 or 60 mm depending of element-spacing.

**Depth** SCE: 98 mm. SCD: 160 mm

# KETA HORIZONTAL

## KETA

The Hudevad Keta Horizontal is a traditional-style radiator made from hollow tubes of expertly manufactured steel. Our Keta radiator is a modern column radiator that is well suited for use in both contemporary as well as historic homes where period features are an important part of the interior.

The Keta Horizontal gives you many choices in terms of sizes and the right colours to fit your design. The Keta radiator is designed to keep your home warm and cozy while also giving you a classical column radiator with all the requirements of heat efficiency and functional design of our modern radiators.

**Height** 400, 500, 600, 750 and 900 mm.

**Length** 394 - 1866 mm in increments of 92 mm

**Depth** 66, 107, 148, 189 and 230 mm

# CLASSIC

## CLASSIC

Hudevad Classic is a Scandinavian, sectional radiator that dates back to the 1930s. The radiator is an aesthetic radiator with a classic look, for modern retro decor and spaces with personality.

The Classic radiator can be used in all kinds of modern buildings and, despite its classic and "oldstyle" appearance, lives up to all modern requirements for efficient heat output. Classic can be delivered as a wall mount version and with several possible floor-mounted solutions.

**Height** 300, 440, 500, 590, 740 and 990 mm depending on type.

**Length** From 30 mm - 4000 mm depending on type

**Depth** 75, 125, 190 and 280 mm

# DANTE

## DANTE

The Hudevad Dante radiator is a classical cast iron radiator in authentic design and make. The radiator is floor mounted (with wall ties for stability) for an original look. The column radiator has four or six columns depth and its design doesn't dominate a room, but rather personalizes it.

Hudevad Dante provides stylish alternatives for low window spaces and attic rooms as well as larger, taller radiators required for hallways and large reception rooms.

### Height

4 columns: 360, 505, 660, 760 and 960 mm  
6 columns: 505, 660 and 960 mm

**Length** 60 - 1972 mm in increments of 60 mm

**Depth** 4 columns: 144 mm. 6 columns: 221 mm

# LST I PLUS

## LST I PLUS

Hudevad LST I Plus is a safety radiator that is often used in public buildings in countries where the water flow temperature is high. The radiator is simple and quick to install. The cabinet is fitted with safety brackets to prevent unauthorized access to the radiator, which is encapsulated inside - and for extra protection, the smooth surface is treated with antibacterial paint.

The standard color is white, RAL 9016, gloss 70, but can be delivered in all RAL colors for a surcharge.

**Height** 500, 650 and 800 mm

**Length** 650 - 2050 mm, in increments of 200 mm

**Depth** 132 mm

# VERTICAL RADIATORS

Many people often choose Hudevad Vertical Radiators because of the beautiful design, functionality and because they often harmonize better with certain types of spaces than other radiators are able to. Our vertical radiators also allow you to mount knobs and towel rails, and are therefore also an elegant and perfect choice for use in the bathroom, hallway and kitchen.

A vertical radiator from Hudevad is most often used in rooms and places where there is limited space. Our customers also choose them for buildings where there are large windows, to counteract cold drafts. However, it is always only the imagination that sets the limits, as our minimalist design helps to create several applications for how and where you can use radiators in construction.

# INTEGRAL VERTICAL

### INTEGRAL VERTICAL

Beautiful, simple and timeless design radiator with a completely smooth front plate, slightly rounded corners and open sides and top.

Integral Vertical is an extremely strong and timeless radiator with a minimalist elegant look and with the option of installation without convectors inside, it also gets top marks in cleaning and hygiene standards. Combine it with hooks or towel rail to incorporate it into the decor and take advantage of the space and heat.

**Height** 1600, 1800 and 2000 mm

**Length** 300, 400, 500, 600 and 700 mm

**Depth** 49, 78 and 101 mm

# P5 VERTICAL

## P5 VERTICAL

Our Hudevad P5 Vertical is the epitome of stylish design and reliable performance and embraces the minimalist Scandinavian look.

Our Hudevad P5 Vertical is narrow and simple, with a smooth front with the characteristic Hudevad edge and is made of 2 mm thick steel. The deeper models of the P5 have closed sides with a streamlined recess that gives the P5 Vertical a completely unique look. P5 Vertical can be used anywhere you want a strong radiator with great performance and its very own unique expression.

**Height** 1620, 1820 and 2020 mm

**Length** 355, 455, 555, 655 and 755 mm

**Depth** 50, 79 and 102 mm

# FIONIA VERTICAL

## FIONIA VERTICAL

Our Hudevad Fionia Vertical, is one of our best-selling and perhaps also the radiator with the simplest expression with completely closed sides, our Hudevad signature edge on the front and with the option of mounting a removable top grille.

Fiona Vertical has a high radiant heat capacity and manages to adapt quickly to very changing temperatures. The standard color is white, RAL 9016, gloss 70, but can be delivered in all RAL colors for a surcharge.

**Height** 1620, 1820 and 2020 mm

**Length** 310, 410, 510, 610 and 710 mm

**Depth** 64, 79 and 102 mm

# PLAN XV VERTICAL

## PLAN XV VERTICAL

Hudevad Plan XV Vertical is one of our most in-demand radiators, which - with really efficient performance and surprising functionality - easily plays its role in the very large rooms and buildings.

Plan XV is made with several radiators inside and finishes with a simple and smooth cover, which makes it ideal for installation and adaptation to challenging locations, where you either want to hide the radiator or highlight it so that it can become an active part of the decoration.

**Height** 2000, 2200, 2400, 2500, 2600, 2800 mm

**Length** 550, 650, 750, 850, 950, 1050, 1150 mm

**Depth** 91, 116 and 173 mm

# SC VERTICAL

## SC VERTICAL

Hudevad SC Verticals narrow, flat water-filled elements are placed vertically from top to bottom and let the sun's light and air easily find their way into the home.

Hudevad SC Vertical is actually created to create an ideal solution for locations by windows, narrow passages or corridors, and other places where there is a lack of space - but SC Vertical is in demand for many other rooms due to its unique and beautiful design. The SC models can also be made in both curved and angled versions.

**Height** 1100 - 2500 mm in increments of 100 mm

**Length** 80 - 1200 mm in increments of 40 or 60 mm depending on element-spacing.

**Depth** SCE: 98 mm. SCD: 160 mm

# KETA VERTICAL

## KETA VERTICAL

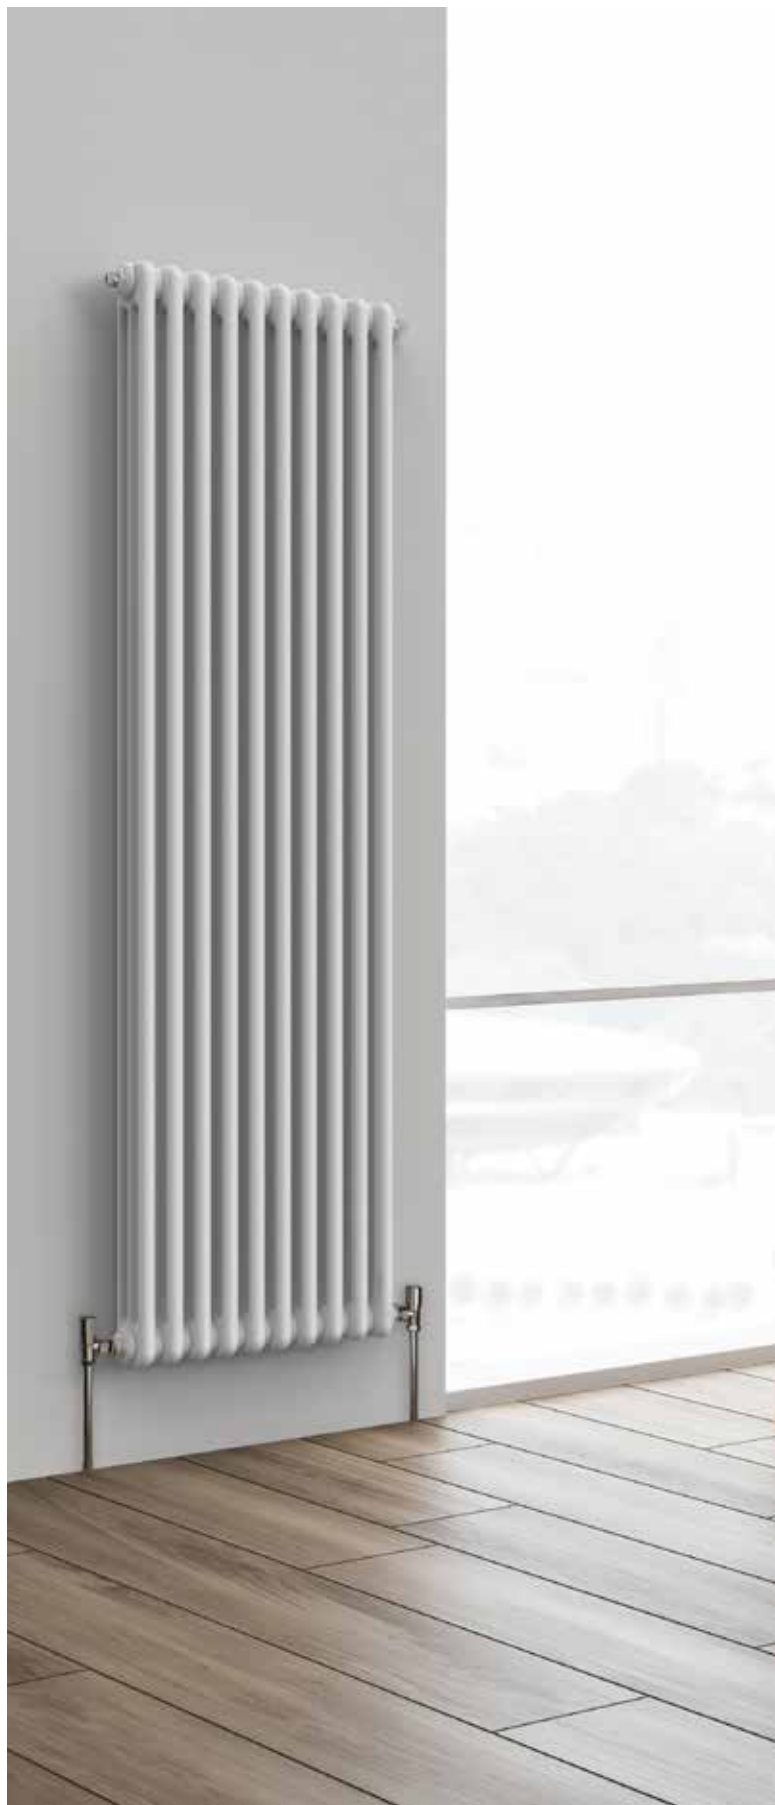

Hudevad Keta Vertical is a traditional but modern column radiator that is suitable for use in both modern homes, but also in older homes, where the period features are an important part of the interior design.

Keta Vertical is, among other things, suitable for use with large window sections to break cold drafts and in places where space is tight, as Keta is available in a wide selection of variants. The Keta radiator is designed to keep your home warm and cozy and at the same time give you a classic column radiator with all the modern requirements for heat efficiency and functional design

**Height** 1500, 1800, 2000 and 2500 mm

**Length** 302 - 946 mm in increments of 92 mm

**Depth** 66, 107, 148, 189 and 230 mm

# LST I PLUS VERTICAL

### LST I PLUS VERTICAL

Hudevad LST I Plus Vertical is a safety radiator that is often used in public buildings in countries where the water flow temperature is high.

The radiator is simple and quick to install. The cabinet is fitted with safety brackets to prevent unauthorized access to the radiator, which is encapsulated inside - and for extra protection, the smooth surface is treated with antibacterial paint.

The standard color is white, RAL 9016, gloss 70, but can be delivered in all RAL colors for a surcharge.

**Height** 2110 mm

**Length** 560, 660 and 760 mm

**Depth** 132 mm

**LOWLINE  
RADIATORS**

Through our creative design, Hudevad Lowline Radiators helps to highlight the interior design of the room and adapts beautifully to the building's appearance. Lowline radiators have a fantastic adaptability and are the perfect solution for rooms with large windows, as they with their minimal height do not screen the view.

With a minimum height of only 200 millimeters, the Hudevad Lowline radiators are in no way a nuisance. Hudevad Lowline has been created as a supplement to our other radiator series Horizontal and Vertical, in order to create a coherent and harmonious expression in the individual rooms and buildings.

# INTEGRAL LOWLINE

### INTEGRAL LOWLINE

Beautiful, simple and elegant with a timeless design that has a smooth front plate, slightly rounded corners and open sides and top.

Integral Lowline is seen in private homes, private buildings and public areas and institutions and is often placed in front of larger windows to avoid cold drafts. The minimalist look with the smooth front plate and rounded corners, makes it easy to clean and fully embraces moderne design standards without compromising on performance.

**Height** 200 mm

**Length** 1000, 1200, 1400, 1500, 1600, 1800, 2000 mm

**Depth** 102, 160 and 218 mm

# P5 LOWLINE

## P5 LOWLINE

Hudevad P5 Lowline is narrow and simple, with a completely smooth front plate and the characteristic Hudevad edge. The radiator is made of 2 mm thick steel.

P5 Lowline has closed sides, welded steel, top with a streamlined effect which allows the air to circulate for maximum efficiency and is the perfect combination of design and technology. P5 Lowline can be used everywhere, but is often placed in front of window sections or where space is tight.

**Height** 220 mm

**Length** 1010, 1210, 1410, 1510, 1610, 1810, 2010 mm

**Depth** 118, 176 and 234 mm

# FIONIA LOWLINE

## FIONIA LOWLINE

Hudevad Fionia Lowline is perfect for preventing cold drafts in front of large windows. The radiator is discreet and simple in its design and has an optimal size for placement under window sills.

Fionia Horizontal has closed sides, the characteristic Hudevad edge and a removable grille with angled slats, so you can't look down into the radiator. The grille is recessed on the top of the radiator so that it is flush with the radiator edge. This gives a calm and classic look, and at the same time reduces damage to the grille. The grille can be secured against theft.

**Height** 220 mm

**Length** 1010, 1210, 1410, 1510, 1610, 1810, 2010 mm

**Depth** 118, 176 and 234 mm

# SC LOWLINE

## SC LOWLINE

Hudevad SC Lowline's narrow, flat water-filled elements are placed vertically from top to bottom and playfully let the sun's light and air find their way into the room.

The SC Lowline is the perfect solution for locations by windows, narrow passages or corridors, and other places where there is a lack of space, and is also available in both angled and curved - depending on where they are to be installed. SC Lowline is made both as wall-mounted and as floor-mounted on integrated legs.

**Height** 300 mm

**Length** 80 - 3000 mm in increments of 40 or 60 mm depending on element spacing.

**Depth** SCE: 98 mm. SCD: 160 mm

# KETA LOWLINE

## KETA LOWLINE

The Hudevad Keta Lowline is a traditional column radiator, constructed from hollow tubes of expertly crafted steel. Measuring just 300mm high, the Keta Lowline is a modern take on the classic column radiator, a historic feature that works well in classic buildings but also stands out in modern contemporary homes.

The Keta Lowline is available in a range from 2 to 6 columns - and in many different colors to match your interior design. The Keta has been developed to keep your home warm and cozy and last but not least to offer you a traditional radiator with all the thermal efficiency and functional design requirements of our modern radiators.

**Height** 300 mm

**Length** 394 - 1866 mm in increments of 92 mm

**Depth** 66, 107, 148, 189 and 230 mm

# PISO

## PISO

Hudevad Piso is a robust and compact low convector. Thanks to the low construction height of max. 280 mm, Piso works well in buildings with limited space, but with large power requirements.

Piso has an exceptionally high performance measured in size and is offered with many different installation solutions, several different brackets and can therefore be placed under benches, ceilings, on the wall and can also be used as a regular lowline radiator with different leg solutions.

**Height** 70, 140, 210 and 280 mm

**Length** 800 - 4000 mm in increments of either 100 or 200 mm.

**Depth** 67, 92, 123, 179 and 235 mm

# LK

## LK

Hudevad LK is our low convector made of profiled steel pipes. The radiator is high quality with a beautiful front and back, so it presents itself nicely from both sides. The beautiful exterior means that there is no need for either sides or top grille. Together with its high performance level, it makes LK ideal for placement in front of large windows, where you also will be able to see back of the radiator. Hudevad LK is available in 2 heights and several depths for a higher performance. Can also be installed in convector trenches, under benches or ceilings.

**Height** 140 and 210 mm

**Length** 800 - 2000 mm depending on type

**Depth** 84 and 157 mm

**BENCH  
RADIATORS**

Hudevad Bench Radiators is a radiator combined with a functional piece of furniture. This symbiosis - furniture and radiator in one - has proven to be a big hit with many of our customers. It is the perfect way to achieve all the features of the furniture combined with the heating efficiency you need, without the radiator having to be prominent in your decor.

The bench radiator is an elegant and modern piece of furniture that fits perfectly in the entrance hall, lobby and even in the bathroom and is one of our many perfect solutions for creating elegant design harmony in the home.

# INTEGRAL BENCH

## INTEGRAL BENCH

Hudevad Integral Bench is not only a radiator, but also a beautiful and elegant piece of furniture. Here, all radiator parts, including pipes and valves are hidden in the legs, so the installation is easy to handle and at the same time looks beautiful and stylish, which also makes Integral Bench a perfect solution for the minimalist lifestyle, whatever it is for a restaurant, school institution, health care, private residence, or company. Can be supplied with several options for wood cladding on top. The standard color of the bench is gray, RAL 7022, gloss 70, but can be delivered in all RAL colors for a surcharge.

**Height** 426 mm

**Length** 1290 - 2090 in increments of 200 mm

**Depth** 228 mm

# NOVUS

## NOVUS

The Hudevad Novus Bench radiator is in demand in many public spaces, such as hospitals, schools, offices and shopping malls.

However, with its symmetrical lines, beautiful and functional shapes without convectors - which make cleaning a breeze - Novus also finds its way to many private homes. Here, the Novus Bench Radiator harmonizes perfectly with the interior and the design of the room. If you have large windows, Novus is also ideal as protection against cold drafts in both the low and high versions.

Can also be supplied with a wooden top plate.

**Height** 190 and 400 mm

**Length** 1000, 1100, 1200, 1400, 1500, 1600, 1800, 2000, 2200, 2200, 2400, 2500, 2600 and 2800 mm

**Depth** 197, 259 and 321 mm

# PISO FORTIS

## PISO FORTIS

Hudevad Piso Fortis is a stylish low convector that is suitable for public as well as private spaces, especially in front of windows, where you want high heat output in combination with a clean design that fits the overall look of the building. Piso Fortis is equipped with convectors and therefore has a large heat output in relation to size.

The bench model in Height 400 mm can not only be used as an efficient heat source, but also as a useful furniture and fits well in eg. hallways, utility rooms and bathrooms.

**Height** 190, 260, 330 and 400 mm

**Length** 1000 - 3000 mm

**Depth** 179 and 235 mm

**OTHER  
RADIATORS**

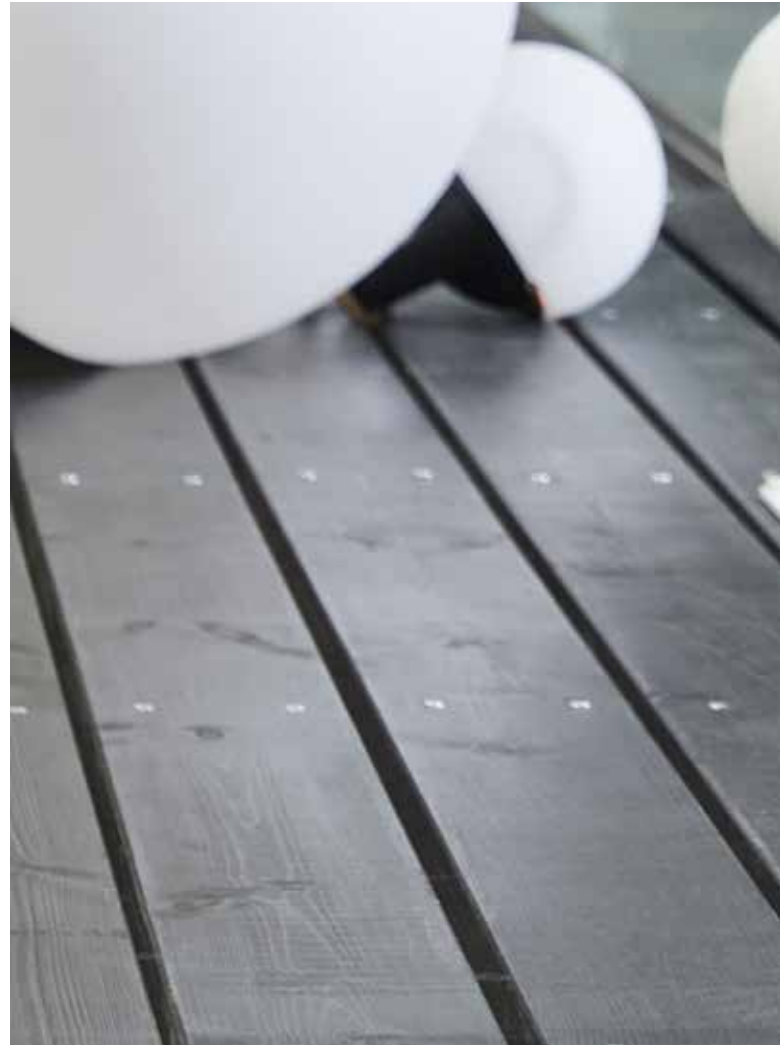

Under other radiators you will find our radiators that do not exactly fit into a common category, radiators for a very specific purpose, radiators that are a little out of the ordinary or just radiators that are manufactured on a pure project basis in larger numbers.

Common to all our other radiators is that they require good craftsmanship and have many work processes that can not be solved by machines, but must go through skilled hands to become the final Hudevad product.

# TUBE

## TUBE

Hudevad Tube is the classic spiral tube radiator. The radiator has the unmistakable industrial design that brings to mind warehouse and factory heating in industrial times.

Hudevad Tube is made with elements in Swedish quality steel, and it impresses with the combination of performance, durability and simple design. Tube is ideal for heating under glass sections and skylights.

**Rib diameter** 84, 108, 140, 156, 169 and 194 mm

**Tube diameter** 33,7, 48,3, 60,3, 76,1, 88,9 and 114,3 mm

**Length** 400 – 3000 mm

# HORIZON

## HORIZON INFILL PANELS

Hudevad Horizon Horizontal infill panels are used to create a continuous appearance, where two or more core Hudevad radiators are mounted together and can also be used to hide pipes or electrical outlets.

The infill panels all have a smooth front and top plate and can therefore be used for all types of Hudevad core horizontal radiators.

**Height** 300, 400, 500, 600, 700 & 900 mm.

**Length** 0 - 1000 mm. The length must be must be specified when ordering.

**Depth** Matching the selected model and type of Hudevad radiator

# TERRA

## TERRA

Hudevad Terra trench heaters are suitable for places with large glass facades. They are often installed in commercial and public buildings, shopping malls, halls and foyers as well as public spaces. They are also common in residential buildings, where they are used to heat living rooms, corridors, entrances and garden rooms. Trench heaters are, as the word indicates, installed in trenches under the floor and therefore do not take up space suitable for furniture and do not interfere with the decor as traditional heaters can do.

The final appearance of the trench heater depends on the visible floor grille. We have a large selection of grilles in anodised aluminum, wood and stainless steel.

Hudevad Terra can be delivered both with and without fan.

# PROTECTOR

## PROTECTOR

Hudevad Protector is perfect for use in sports facilities, sports arenas and gyms and easily handles challenges such as statics and lack of space. Hudevad Protector is slim but extremely robust and easy to integrate. Protector can be made in a myriad of sizes, so that the individual modules are adapted to the project. RAL color as desired. Can also be supplied with storage solutions.

**Frontplate Height** 2000-2800 mm above floor, additional height at the angled top cover.  
Note: Options for other sizes

**Length per section** 1000 mm with the possibility of customization.

**Depth** 260 mm.  
Note: Options for other sizes

# ACCESSORIES

## HUDEVAD ACCESSORIES

Hudevad can supply a very varied selection of mounting fittings for installation of radiators. Here you will find, among other things, a large selection of valves, thermostats and most of what you need for the actual installation. If you want the radiator on legs or fitted with other supports, we are also able to help.

In addition, we offer a large selection of accessories products for many of our radiators such as knobs, hooks, towel rails as well as cushions and wooden tops for bench radiators.

You will find our complete selection of assembly and accessory products in the Hudevad Price List.

# HUDEVAD DESIGN LIVING

At Hudevad, it is important to us that our products become an integrated part of the user's home and decor. We understand that a radiator is not at the top of the wish list of either the architect, interior designer, or homeowner, as many radiator-designs really aren't very pretty and is one of the things in a building that needs to be there out of sheer necessity. Most people therefore have a desire to hide the radiator as far away as possible.

At Hudevad, we have chosen the approach that radiator design should be more than just a heat source. We create radiator designs with a simple and timeless expression with lots of choices for shapes, sizes, and colors, thereby giving the user the opportunity to choose whether the radiator should act

as an eye-catcher in the interior, emphasize or highlight a specific part of an interior or whether the radiator should slide into the background, stored in a piece of furniture, built into the wall, or have a function such as towel dryer or act as a wardrobe.

For us, Design Living is the use of a good design that fits in everywhere, emphasizes the individual style, decor and interior and is contributing to the creation of the right atmosphere - yes, basically contributing to a lovely home and building to live in.

Trends and fashion change every single year and therefore we consciously avoid designing and producing products that follow fashion and the current trends. Simple never goes out of style and a pro-

duct of uncompromising quality only needs to be purchased once. We consider our products to be a long-term investment. At Hudevad, you will never find a spring or autumn collection, instead we offer products with a virtually lifelong durability. For us, it is important that our designs are also beautiful in 50 or 100 years and therefore do not need to be replaced when various housing trends replace each other, when the colors of the home need to be updated or when other installations need to be replaced by new contemporary versions. Often our radiators still last when the building in which they are installed is ready for demolition!

We place a great deal of value on the reputation of our products to pass "the test of time", because we

believe that anything that is less than excellent in design, quality and craftsmanship is simply a waste - not just of money, but also of important resources.

For us, Design Living is simply about creating beautiful and functional world-class radiator design that underpins and supports the building's room or room's expression and soul and makes the people who use our products feel comfortable in an environment that creates joy and heat.

A close-up photograph of a radiator. The radiator has a metal frame with a series of light blue, U-shaped fins. It is surrounded by wooden slats, some of which are light-colored and others are darker. The background is dark and out of focus.

# HUDEVAD COUNSELING

At Hudevad, you will meet competent and committed advice for the various solutions within design radiators. We have experienced experts in architectural and engineering consulting, who advise on solutions rooted in Danish design philosophy, where uncompromisingness in relation to quality-assured design is the key word.

We help to identify specific wishes and needs at the start of the planning and work with architects and engineers to find the right solution that meets all relevant requirements. Often there is a need to develop a special solution for the individual project and here we are of course with you all the way and prepare prototypes, mockups, drawings, etc. For larger projects, ongoing follow-up meetings are held with the parties involved, so everyone works towards the same goal.

We prepare all relevant technical documentation according to current rules and your needs and are happy to hold training courses for relevant employees, if necessary.

We advise worldwide and are here to assist in planning your next radiator project with focus on special solutions, functionality, heat optimization and the building or the rooms aesthetics.

In addition to aesthetics and high quality, we also focus on energy-efficient solutions and sustainable construction, as we want to offer heating solutions that fit into modern and future-proof buildings, with a strong focus on the environment, green energy and sustainability.

We advise, among other things, within:

- Requirement specifications
- Project specifications
- Modern heating solutions
- Heat optimization
- Heat output
- Radiators with special requirements
- Special solutions
- Colors
- Preparation of technical documentation
- Training in different calculation methods and new products

# HUDEVAD CARES

## REDUCE

### CLIMATE AND RECYCLABILITY

In the world, many are looking towards Denmark when it comes to developing some of the future solutions that will help save our common planet. We have the resources to ensure that the solutions we devise and develop are both quality-assured and sustainable at all levels.

Therefore, we also believe that Denmark must be a pioneering country and come up with some of the important adjustment solutions. And we want to join! The energy sector is one of the most important areas. And Hudevad has both 100% recyclable products and one of the most energy-efficient solutions for renovating homes and offices in the metropolises.

### GREEN HEATING

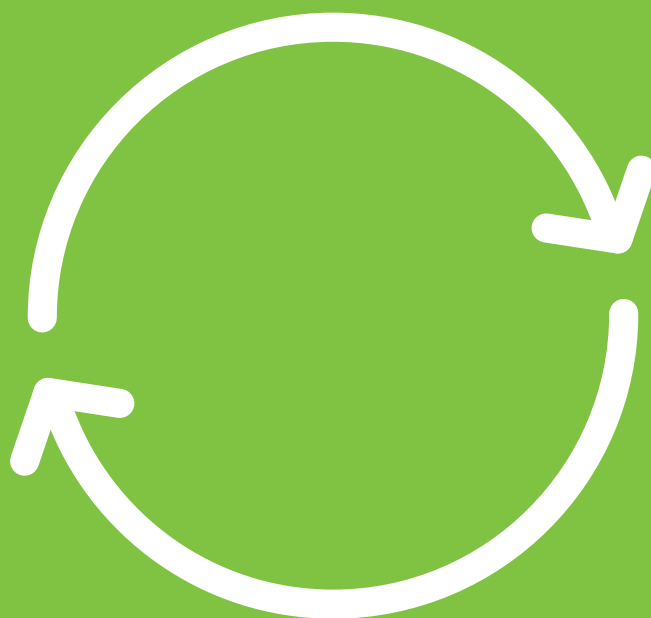

Intelligently produced radiator heating is not just an energy efficient and sustainable solution. The large surfaces and minimal content of water mean that the temperature is quickly regulated. A rapid adaptation to the environment means lower energy consumption and less CO<sub>2</sub>, which in the end is a

benefit for both the environment and the economy. There is thus also less heat loss than with other heavier heat sources. At the same time, our radiator design is timeless. This means, among other things, that even though current trends, tendencies and fashion can lead to changes in the building's interior design and colors on the walls - the Hudevad radiators remain a timeless Danish design that always fits into the building.

### STEEL - A SUSTAINABLE CHOICE

Steel is without a doubt a "heavy" metal to extract, but that does not necessarily mean that the material is bad for the environment and our planet. Once the steel is extracted, it can be recycled over and over again with the use of very few resources without leaving the sustainable cycle. This means that the steel does not disappear and can be reused again and again in the future without losing its properties.

Steel is the main component in most of our radiators and gives Hudevad products a long life cycle. Durability ensures that even in busy and exposed environments, the radiators and their design remain

## REUSE

intact. Often, our radiators last even longer than the actual building in which they are installed and rarely need to be replaced throughout the lifetime of the building.

In addition, we are constantly trying to improve and optimize our products to save on our resources and reduce our production waste. It can be through a new design that uses thinner steel plates or re-design of a radiator so that it can be produced with less energy consumption. That way, we save on our production budget, and we reduce our consumption of new resources.

# HUDEVAD CARES

## RECYCLE

### WE REUSE THE RESOURCES

Even with the long durability and life of our radiators, all our radiators can be recycled 100% after use and melted down into new radiators or brand-new products.

This - e.g., by returning the products to our factory so that they can be included in new radiator designs - can save our atmosphere from further CO2 impact.

All surplus material from our factories, e.g., clippings and punched pieces, are collected, sorted and recycled. The material parts that are not part of the finished product therefore become part of our steel's "circle of life" and can end up in the factory again as "new" material, ready for use in production again.

Most countries today are really good at recycling steel and we therefore recommend that you do not transport the radiators unnecessarily far after use, as this can have a negative effect on the product's environmental footprint.

### WHAT ELSE DO WE DO ?

Working with the climate and our immediate environmental impacts has become an important part of our DNA, so we can ensure that we also have a planet to pass on to future generations. Not only are we trying to optimize our production, but of course we have also looked at what other actions we can take, both now and in the future.

We would like to be able to guarantee that we also deliver better and more green heat and therefore work continuously with the following points:

#### POLLUTION PREVENTION

- Sorting of all waste
- We minimize the use of plastic everywhere - e.g., all Hudevad products are packed and sent in cardboard boxes and are no longer wrapped in plastic.
- Uses LED lighting throughout the company
- Our electrical appliances are at least A ++
- Only uses electric trucks in our warehouse
- Ship weekly deliveries to our stock-bearing customers
- Uses paint without heavy metals

WE ARE CONSTANTLY ADDING NEW THINGS TO OUR **“GREEN ACCOUNT”** AND ARE CONSTANTLY WORKING ON MORE AND NEW PROJECTS AND INITIATIVES THAT CAN MAKE OUR HEAT EVEN **GREENER** AND HELP US ALL TOWARDS A MORE **SUSTAINABLE** AND LESS EXHAUSTING TREATMENT OF OUR PLANET.

OUR PRODUCTS POSITIVELY CONTRIBUTE TO YOUR CONSTRUCTION PROJECTS **DGNB CERTIFICATION**.

#### SUSTAINABLE USE OF RESOURCES

- Our wooden pallets are recycled
- We only use FSC certified wood in our warehouse and for our special pallets
- We use Fairtrade products, such as coffee, tea, cocoa, etc. in the canteen
- We only use eco-labeled cleaning products
- We use the Nordic Ecolabel and FSC certified paper for all our printed matter

#### COMBATING CLIMATE CHANGE

- We have minimized our flights by more than 65%
- When we fly, we CO2 compensates for all flights
- As of 1 January 2022, all our company cars will be replaced with hybrid cars and we thereby reduce our CO2 emissions by 123 g CO2 per kilometer driven.
- We have flexible work arrangements and, where possible, everyone works at home from a minimum of 2 days a week, so driving is minimized.

- We use sustainable IT solutions, data solutions and servers
- We only buy and use green electricity from renewable energy sources - that is, our electricity consumption is 100% CO2 neutral.

#### PROTECTION OF NATURE

- Here we are working on new projects in and around the company, where we are looking at collecting rainwater, creating a biodiversity garden and buying several square kilometers of rainforest.

# CONTACT HUDEVAD

## WE WERE HERE YESTERDAY

Hudevad Radiatorfabrik saw the light of day in 1936 in the small town of Hudevad, but was founded as a blacksmith smithy back in 1897. Our Hudevad Plan radiator was produced for the first time in 1938 and has been one of the building blocks for all future Hudevad Radiators. The robust feel and the unmistakable Hudevad look have not changed much over the years and are a sign of the proud and dedicated craftsmanship that has always been a part of who we are. In 2005, Hudevad was bought by Denmark's largest radiator manufacturer - Ribe Jernindustri - and moved from Hudevad to Ribe.

## WE ARE HERE TODAY

Ribe Jernindustri closed in 2018, and Hudevad was sold to the British Stelrad Radiator Group. Focus on profitability, streamlining and production optimization is an important issue for Stelrad Radiator Group, and therefore new production facilities and new production methods were introduced in 2020.

In October 2020, Hudevad Radiator Design moved from Ribe to Kolding, where new offices, a large warehouse and a special Hudevad production were inaugurated.

## WE ARE HERE TOMORROW

The relocation of our production meant a reconsideration of our well-known Hudevad designs to ensure that Hudevad still meets tomorrow's heating requirements, and that quality, form and function and the special "Hudevad feel" are still there.

It is important that the feel and overall expression of our Hudevad radiators remain the same even if the production methods change and some models get a slightly different look. The large investments in production, warehouse and offices are part of our continued Hudevad journey ahead and ensure that our beautiful design radiators are also here tomorrow.

#### **GIVE US A CALL**

Our sales team and customer service are always ready to help if you require assistance with our products, with prices, deliveries etc.

#### **OUR CUSTOMER SERVICE IS OPEN**

Monday - Thursday 7.30 - 16.00  
Friday 7.30 - 14.00
