

PAX[®]

A towel warmer
for every room

2021/2022

A towel warmer adds a touch of elegance to your everyday life

Sit back and be inspired by our extensive range of towel warmers. A towel warmer helps you add a touch of elegance to your everyday life, and is perfect for your bathroom, kitchen or even your hallway.

Discover our new Black Edition-serie, black towel warmers with matt finish. The new serie is available in the popular electrical models Flex U, Flex I and Limbo.

Momento II™ is our updated and unique timer, which gives you the option to control your towel warmer with the Pax Wireless app.

While you carry on browsing and thinking about how to update your home, we continue to work on innovative models and smart solutions to simplify and add luxury to your everyday life.

Unique timer with
exclusive features

Momento II™

- Multiple different power levels
- Available for both electrical and combined towel warmers
- Manufactured in Sweden
- Weekly programs with time intervals via the app
- Saves both energy and money without sacrificing comfort and function
- Pair with Pax Norte bathroom fan for unique opportunities.

Momento II™

– unique timer with app control feature and power levels

With Pax Momento II™, your towel warmer is only running when you need it to be, so you can easily lower your electricity bill without compromising on everyday luxury.

Momento II™ comes with dozens of smart features that allow you to save energy, improve your indoor climate and simplify your everyday life.

You can choose to control you towel warmer manually or via the app Pax Wireless for more functions. Momento II™ gives you full control over when you want your towel warmer to be on.

With the app, you can also set multiple different power levels. This allows you to optimize the use of your towel warmer as it is only running when you need it to be.

If you have a Pax Norte bathroom fan in the same bathroom as your towel warmer, you can pair them so the towel warmer switches on automatically when the fan's humidity sensor detects an increased humidity level, for example when you start showering.

The light is turned off when the towel warmer is off.

A red light means that the towel warmer is warm.

A blue light is illuminated when pairing with a mobile phone via Bluetooth.

The Pax Wireless app can be downloaded from the App Store or Google Play. See pax.se for more information about Momento II™.

WallFix™

– the smart coupling housing

All Pax towel warmers with Momento II™ are equipped with WallFix™, a smart separate coupling housing with plenty of space to make wiring and installing your towel warmer quick, smooth and straightforward.

1. Screw the coupling housing onto the wall.
2. Connect the wiring.
3. Dock the towel warmer and mount the other wall brackets.

Done!

Pax Norte

– innovation in every detail

Pax Norte® is a multifunctional bathroom fan that is ready to use straight after connection to the mains. In its standard configuration, the Norte reacts to both moisture and light completely automatically, at three speed levels. Pax Norte® is available in white and matt black design.

If you want more features and to get more use out of your fan, you can download Pax's smart Pax Wireless app. Using the app, you can also configure heat transfer, calendar functions, boost mode, constant flow and ventilation functions for your fan.

Through the app, the fan can also be paired with all our towel warmers equipped with Pax's new Momento II™ timer so the Norte can switch the towel warmer on automatically when the humidity level in the room increases.

Fully automatic fan with app control feature.

Towel warmers in Black Edition

We are now expanding our range of towel warmers with a **Black Edition-serie**.

The new serie is available in the popular electrical models Flex U, Flex I and Limbo.

The black colour with matt finish gives an elegant look and fits both modern and classic decor.

The new design serie is suitable in the bathroom as well as in the rest of the home, for example kitchen, hallway or why not in the bedroom?

Momento II™ - unique timer with app control feature
All Pax towel warmers in the new Black Edition-serie are equipped with our unique timer - Momento II™.

Momento II™ comes with dozens of smart features which allows you to save energy, improve your indoor climate and simplify your everyday life.

Combined warmers

– for electric heating, water-heating or combined

Pax combi warmers are filled with water on installation, and are either heated with a Pax electric element with the unique Momento II™ timer and/or by connecting to your existing closed heating system via radiator valve.

Pax combi warmers are pressure tested up to 10 Bar, our models are designed and manufactured to be installed in a closed heating system. Do not use our combi warmers in hot water tap systems.

If you install both an electric element and a radiator valve, you can use your towel warmer even when the closed heating system is turned off. That way, condensation and damp are kept at bay even in warm summers.

Both the electric element with Momento II™ timer and radiator valve are sold separately.

Viola

– a towel warmer that makes a powerful statement

Viola is perfect for bathrooms that need a towel warmer that looks good. Square side tubes and round horizontal tubes in polished stainless steel.

Combined warmer
 Heat type Water-filled.
 Heated by Pax electric element and/or existing closed heating system.
 Width 550 mm

Electric towel warmers

Pax electric towel warmers are heated with an energy-efficient double-insulated heating cable. Many of our models are available as standard with Momento II™, a timer with a unique memory function which allows you to save up to 75 per cent on energy consumption without compromising on comfort. Read more about Momento II™ on pages 6–7. All electric warmers are S marked and IP44 rated.

Limbo

– lightweight and compact

Limbo is an electric towel warmer with a slim, discreet design. The warmer measures just 5×140 cm, which makes it easily positionable. Choose from white/chrome and pure chrome versions.

Electric towel warmer
 Heat type Electric heating cable.
 Power 24 W

Flex I

– pivoting arms
in a small area

with optional Memento II™

Flex I has individually pivoting arms that you can move as you wish, either to maximise your drying capability or to make Flex I as compact as possible. The tubes are straight, which makes it easy to hang up and take down your towels.

You can order your Flex I in several configurations. Choose anything from two to six individually pivoting arms to 180°, meaning you can have it set both on the right and left.

Electric towel warmer

Heat type Electric heating cable.
 Power 20–60 W
 Width 560 mm
 Height Flex I 2 arm 330 mm
 Flex I 3 arm 420 mm
 Flex I 4 arm 510 mm

Flex U

– easy to reconfigure

with optional Memento II™

Flex U has excellent drying capabilities. The individually pivoting U-shaped arms allow towels to hang freely in the air when needed. Construction is very sturdy, with metal consoles.

With Flex U, there are plenty of possibilities. Choose from two widths: 455 or 655 mm, and the number of arms: between two and five. Each U-shaped arm is individually pivoting to 180°, which means that you can mount the towel warmer to both the right and the left.

Electric towel warmer

Heat type Electric heating cable.
Power 28–106 W

Practic

– fixed or pivoting, practical and flexible

with optional Momento II™

Practic is a great-value towel warmer with a practical construction. Thanks to its generous curves, towels hang freely, reducing drying time.

Practic is supplied with an extra wall bracket so you can decide for yourself whether you want to be able to pivot it out into the room (mounted in pivoting configuration), or whether you want to mount it in a fixed position on the wall using the extra bracket.

Electric towel warmer
 Heat type Electric heating cable.
 Power 60 W
 Width 573 mm
 Height 750 mm
 Finish Chrome
 Material Steel
 Mains connection Hidden, fixed connection.
 Features Fixed or foldable to 180°, extra wall bracket included for fixed installation onto wall.

Variants
 With optional Momento II™ timer.

Accessories
 8340-5 Cable and plug for connection to mains socket.

Stated dimensions may vary. Never drill holes in the wall without first checking the dimensions of your actual towel warmer.

230 V AC 50 Hz, Class II (double-insulated, earthing not required) IP44 CE

TR-i

– fixed or pivoting, you decide

TR-i warmers are reversible, which gives you several options. You can decide yourself whether you want to have fixed or pivoting. For fixed installation onto the wall, mount with the extra mounting bracket supplied. These towel warmers are reversible and can be installed with the mains connection on any corner, which makes TR-i easily positionable in all environments.

TR

– four sizes, reversible and low energy consumption

With its classic design and curved tubes, the Pax TR is easy to use. It is available with chrome or glossy white tubes.

The rotatable and movable wall mounts lock the towel warmer onto the surface below in a unique way when you tighten the screws. The rotatable mounts also allow you to position the coupling housing on any corner.

With its low power rating (30–60 W), the Pax TR series uses up to 33 per cent less electricity than comparable competitors, without compromising on drying efficiency or heat comfort.

The TR standard series is perfect for do-it-yourself installation. They are supplied with a factory-fitted cable with plug and omnipolar switch. The TR objekt series is the professional's choice. Supplied without cable/plug for concealed connection.

Stated dimensions may vary. Never drill holes in the wall without first checking the dimensions of your actual towel warmer.

FAQs: the dry facts

Some common questions to our customer support

1. Can I install my towel warmer myself?

If your towel warmer has a factory-fitted plug, you can install it yourself, outside of area I (see general building regulations).

If your towel warmer has a concealed connection or central heating connection, it should always be installed by a qualified installer.

We recommend that you always consult a qualified installer first to find out what type of installation is appropriate.

2. What type of towel warmer is right for me?

If you only want to use your towel warmer to dry and warm towels and clothes, an electric towel warmer is ideal. You can choose from the entire Pax range.

If you want to use your towel warmer instead of a radiator to heat a room, we recommend a combination electric and central heating towel warmer. Find out first how much heat the towel warmer needs to replace to calculate your heat needs, and then choose a towel warmer that is the right size for you.

3. Can I install my towel warmer upside down?

No. Our products are made to be installed in a specific way. If you install the product in the wrong direction, it is highly likely that it will not function as intended. Always ask a qualified installer if you are unsure.

4. What are CC dimensions?

CC dimensions refers to the centre-to-centre dimensions of the distance between the connection pipes and the screw holes.

5. What does combined central heating and electric mean?

If you have a central heating towel warmer, you can connect it to your central heating system with a radiator valve. However, it is always a good idea to add an electric element so that you can have the towel warmer on even in the summer when the heating in your house is usually turned off. In the summer, towel warmers are vital

as the high humidity level makes clothes and towels dry slowly. This increases the risk of mildew and bacterial growth.

6. How much water do I need to fill my towel warmer with when installing?

Fill the water until the upper horizontal rail is half-filled with water. Note that if the water level is too low this may affect the electric element, and if the water level is too high, this will not leave sufficient space for the water to expand* during heating, so make sure you fill your warmer correctly.

Always ask a qualified installer if you are unsure.

* Water expands when heated. Leave the air valve open the first time you heat up your towel warmer to the its maximum temperature (approx. 60–65°C). Close the valve when the warmer has reached its maximum temperature.

7. What is an open-vented system?

An open-vented system circulates heated tap water.

This type of system is found almost exclusively in multiple-occupancy homes. Pax observes water industry regulations and does not advocate the installation of towel warmers in open-vented systems, among other reasons due to the risk of growth of legionella bacteria.

8. What happens to my product in the event of a power cut?

If you have a timer that was not set using the app, it will be cleared after a power cut. If the timer has been set using the app, it will be kept, but the Memento II™ will lose the correct time, which is indicated by a slow-flashing red light. To reset the clock, simply connect to the app and retrieve the correct time. Products without timers are simply on or off.

9. Why should I choose Memento II™?

If you use the Pax Wireless app, you can configure up to 20 individual timers per week, and you can adjust the power via the app to anything between 20 and 100 per cent. Through the app, you can also pair your Memento II™ with a Pax Calima bathroom fan so your towel warmer is activated when the humidity level

increases. This feature does not affect other features/timers.

10. What are IP ratings?

When you install an electrical appliance in a bathroom or other room with wet equipment, you must take into account IP (Ingress Protection) ratings.

Every electrical appliance is marked with an IP rating which indicates its level of protection against water and dust. Wet areas are divided into three IP zones which each have a different minimum IP rating requirement.

A qualified installer is the only person to determine where in the wet area installation is safe.

11. What should I consider when choosing radiator valves?

Pax combi warmers are pressure tested up to 10 Bar, our models are designed and manufactured to be installed in a closed heating system. Do not use our combi warmers in hot water tap systems.

Work out whether you have the option to install your combi warmer with concealed pipes in the wall, or whether you will need external radiator pipes. The next important step is to decide whether you want to run your combi warmer solely on closed heating system or combined with an electric element. We recommend combined for guaranteed comfort all year round, even when your central heating is turned off for the summer.

12. What does CE and S marking mean?

CE marking is a legal requirement within the EU. By CE marking its product, the manufacturer certifies that the product complies with the safety requirements applicable within the EU.

The S mark is a voluntary certification.

With an S mark, the manufacturer is informing the customer that the product has been tested and approved by Intertek.

Intertek is an independent testing laboratory that tests products to determine whether they meet safety requirements, including for electrical safety, fire protection and mechanical injury risks.

Five-year warranty – we believe in our high quality

Pax has high standards when it comes to quality. We think you do too. That's why we give you a five-year warranty on all our towel warmers. The warranty entitles you to report faults and defects for up to five years from the date of purchase.

The terms of the warranty require that the product is installed and mounted according to the instructions provided, and that the way it is used does not violate our maintenance instructions.

The warranty does not cover any damage resulting from improper handling,

installation or cases of indirect damage. Repairs performed without our permission during the warranty period are not covered by the warranty.

We believe in our high quality. In partnership with our suppliers, we carry out strict quality control checks and rigorous testing at our factory. After this, we quality-check our components in our own quality department before we decide whether they live up to the high Pax standard.

Dry towels – this is our mission

Pax is a Swedish brand based in Hälleforsnäs in Södermanland. This is where we design, produce and install our products.

Pax's basic idea when it comes to product development has always been to create products with both design and functionality in mind. A good example of this is Momento II™, our unique timer which allows you to save up to 75 per cent on energy consumption without compromising on comfort.

From the outset, Pax has strived to produce and develop products with consideration for the environment. We have minimised the use of chrome-coated plastic, as this cannot be recycled. We are also trying to increase the proportion of our products that use stainless steel, as it has a lower overall environmental impact than Stainless steel.

All co-workers at Pax has a passion for our heritage, and we are constantly striving to challenge ourselves to create new, inspired products.

Pax – innovating every day since 1945

After the Second World War, the world was reset. It went from suffering and ruin to peace and hope for the future. Sweden put all its energy into growth and development, a situation that was perfect for inventor and entrepreneur Folke Andersson from Eskilstuna. The same year the war ended, he founded Pax and started producing extractor fans for kitchens. The meaning of the company's name is far from coincidental: Pax is the Latin word for "peace".

Wealth continued to grow in Sweden, and people developed new habits. People started showering, for example, and taking long, frequent baths. Natural bathroom ventilation was no longer enough. Folke Andersson, who had by then moved offices and production to the town of Hälleforsnäs in Sörmland, saw a solution, and Pax launched Sweden's first extractor fan made and approved for wetrooms.

Every year, Pax sells almost 100,000 wetroom fans. Since Folke Andersson

founded the company, around three million Pax fans have been sold, contributing to better air in the home.

Today, Pax is so much more than a fan brand. Through development and acquisitions, Pax's range has been broadened with towel warmers and radiators. This means that Pax draws power from three roots.

Pax is part of Volution Sweden's strong brand portfolio.

Every day, we endeavour to continue Folke Andersson's innovation. Our range now includes a full breadth of heat and ventilation products which all contribute to a sustainable, modern and healthy environment at home.

For a better
environment
at home.
